

REPORT ON THE REVIEW OF DATA OF GREEN HOUSE GAS EMISSION (*in terms of Kilo Tonnes CO₂e*) FOR THE PERIOD JULY 2008 TO JUNE 2009

The Board of Directors
HCL Infosystems Limited
Noida, Sector 11
Uttar Pradesh, India

We have, at the request of the Management of HCL Infosystems Limited ("the Company"), reviewed the Green House Gas ("GHG") emission of the Company for the period, with effect from July 2008 till June 2009, as, prepared by the Company and reported to us.

The Company is responsible for the identification and presentation of information including the responsibility for establishing and maintaining relevant and appropriate performance management systems and internal control framework to facilitate collection, calculation, aggregation and validation of the data with respect to the GHG emission reported to us and for obtaining Assurance Services on the same.

Our Scope of Work, as agreed with the Company, is focused only on the review of the GHG emission reported, specific to the aforesaid period and then to conclude, based on our review, whether the reviewed GHG emission, is in accordance with the records of the Company. Our work has been performed in accordance with the International Standard on Assurance Engagement ("the ISAE") 3000, issued by the International Federation of Accountants.

Our work, included sample tests of data from the books and records of the Company and analytical procedures and discussions with the management of the company, to the extent we considered necessary and appropriate to provide sufficient evidence, for our conclusion. Technical assessment of the efficacy of any of the equipments is beyond the scope of our review.

The Company has accounted the GHG emission for its 210 sites operating in India, resulting from the fuel purchased and consumed for in-house power generation, food preparation and electricity imported, of which, we have reviewed and verified 11 sample sites, for assessment of GHG emission. The 11 sample sites account to approximately 62.21 percent of total built up area of the 210 sites. On the basis of the methodology adopted and review conducted by us, it could be estimated that the 210 sites of the Company have released a GHG emission of 12.33 Kilo Tonnes CO₂e ("Carbon-di-oxide equivalent"), for the aforesaid period.

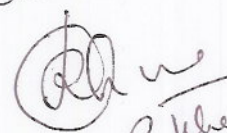

We believe our work provides an appropriate basis for our conclusion. The Company has defined certain internal controls and procedures for strengthening its GHG emission reporting framework and intends to progress on it further to cover all its operations and subsequently extend it across its supply chain downstream. Based on the work done by us and the documents and records examined by us, as aforesaid and according to the information and explanations provided to us, we are of an opinion that the estimate of GHG emitted, is based on certain assumptions and parameters and other records available with the company, to support the estimation. We are reasonably satisfied with the management's estimate of GHG emitted for the aforesaid period.
